What is Artemis Shielding?

What is Artemis Shielding? Good question. I have lived in Fort Payne, AL my entire life, and when a business pops up in this little town, you start getting curious. For the next year, I drove by wondering what in the world Artemis Shielding was because I thought their logo looked cool. Little did I know, I would get the pleasure of not only learning about this business, but also meeting some amazing people. Let me tell you a little bit about them!

Artemis Shielding is a company that is ran by a group of retired Special Forces Veterans who produce Radiation Shielding Material (RSM). What is that? Another good question, because I asked the exact same thing. See, I was a person that had zero experience in this industry. I knew what radiation was and I knew that when I go to the dentist they lay that extremely heavy vest on my chest and I feel like I can't breathe when they are doing x-rays on my teeth. I also knew that those vests were made with toxic lead inside of them. I want to tell you what Artemis Shielding is from an outside perspective!

Radiation Shielding Material is just that. Material that shields you from radiation. On average, a full coverage lead-based apron weighs 11 – 15 pounds or more depending on the size and protection level. I mentioned before about dentist and doctor offices using them to shield their patients from radiation, but employees have to wear those vests every day, all day to protect themselves. Can you imagine wearing an extra 15 pounds on your back? Not me!

Artemis' Revolutionary Nanotek™ Radiation Shielding Material offers a non-toxic, lead-free replacement to the toxic, traditional lead shielding! Artemis Shielding's material and line of products also, on average, weigh 30% less than the traditional lead vests! Want to know the most amazing thing? IT SERVES THE EXACT SAME PURPOSE! So, why would you not want Artemis Shielding to provide you with protection from radiation?

Typically, when you think of radiation, you automatically think of doctor's offices and hospitals, at least I did. I guess we tend to think of those places because that is what we physically see, but I was amazed to find out that the radiation industry is everywhere! Did you know that they have to line the walls with Radiation Shielding Material in the room that you get x-rays done in? What about at Veterinarian Clinics where they x-ray animals? You know those curtains that are hanging on the x-ray machine that your belongings run through at the airport for them to x-ray them? What about in the lumber industry where they have to x-ray logs to see if they have bad places in them? Those all require radiation shielding material that Artemis can provide you!

Artemis Shielding provides a line of radiation shielding garments, adhesive material to stick on the walls or materials to go inside of walls. Artemis also offers custom cabinets, bricks, security curtains, custom barriers, blood vile shielding cases, and so much more! Come check out the website and like our Facebook page for updates and information!

#####

Artemis Shielding is a VOB owned and operated radiation shielding manufacturer based in Fort Payne, Alabama. Artemis products are made in the USA, lead-free, non-toxic and designed to reduce radiation exposure across applications in the nuclear, medical, industrial industries and beyond. As a global provider of radiation shielding material, our team of physicists, engineers, and business leaders are committed to developing a customized, precision fit solution for your application.
